SUMMARY

A Full Stack Developer with 2+ years of experience building and maintaining web applications using the MERN stack. Experienced in creating RESTful APIs, responsive interfaces, and real-time features. Knowledgeable in database design (SQL & NoSQL), cloud deployment, and cross-platform development. Focused on writing efficient code and improving user experience. Work well in collaborative environments and enjoys solving technical challenges.

EDUCATION

Bachelor of Technology

2019-2023

Computer Science and Engineering

SKILLS

Frontend	React.js, Next.js (App Router), Redux, Zustand, Context API, Tailwind CSS, Bootstrap, Axios, Media Queries, Zod
Backend & APIs	Node.js, Express.js, NestJS, REST APIs, Next.js API Routes, JWT Auth, Nodemailer, Google OAuth2, Socket.io, Firebase Auth
Database	PostgreSQL, MongoDB, MySQL, Firebase, Supabase, Prisma, TypeORM
DevOps & Tools	Docker, Git/GitHub, AWS (basic), CI/CD, Jira, Linux, Agile, Security Best Practices
Testing & Optimization	Unit Testing, Performance Optimization
Languages	JavaScript, TypeScript, Python, Java

EXPERIENCE

Full Stack Developer - Reon Technologies

October 2023 – July 2025

- Designed and deployed a full-scale ERP system (Accounting, Sales, CRM, HRMS, Inventory, Rental, Repair) using React.js, NestJS, TypeScript, and PostgreSQL, streamlining operations and reducing manual workflows by 40%.
- Accelerated frontend performance by 30% with dynamic imports, code-splitting, and Redux optimization, improving responsiveness across ERP modules.
- Built and optimized RESTful APIs with Prisma and PostgreSQL, cutting bug reports by 35% and improving system reliability with microservices and WebSockets for real-time updates.
- Enhanced data security and compliance by implementing authentication, encryption, and role-based access control (RBAC) for multi-role ERP users.
- Boosted team productivity by 25% and sprint velocity by 20% through Agile practices
- Implemented CI/CD pipelines and cross-functional code reviews to streamline development.
- Streamlined onboarding by 40% via detailed documentation, Postman collections, and Swagger-driven API visibility.

PROJECTS

Saylt – Real-Time Chat Application

- Accomplished real-time messaging functionality with 500+ simultaneous users, by designing secure Socket.io connections and implementing JWT-based authentication.
- Achieved efficient message handling with 60% reduced latency, by optimizing event broadcasting and structuring a relational database with Prisma.
- Enhanced full-stack understanding and maintainability, by developing both frontend (React + TypeScript) and backend (NestJS) components independently.

Univote – Online Voting Platform

- Delivered OTP-secured voting for 1,000+ users, by integrating Nodemailer and Google OAuth2.
- Increased vote integrity by 95%, by implementing unique poll codes and Zod validation.
- Accelerated development speed by 30%, by architecting features in Next.js with SSR and API routes.

Hotbid – Online Auction Platform

- Achieved real-time bids on 1,000+ items, by implementing WebSocket state sync between frontend and backend.
- Enabled secure Stripe payments, ensuring reliable transactions for auction winners.
- Improved frontend usability, by designing modular dashboards and interactive bid components.
